DETAILED ACTION

Drawings

The drawings are objected to because in page 5 of the specification the "reflected light signal" is referred to as S_{eo} when later in the specifications it is referred to as S_{hr} . This appears to be a minor error in the numbering of the feature. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3662

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohtomo (5075878).

Referring to claim 1 Ohtomo shows a multiple frequency generator (figure 1), a laser transmitter (figure 1 Ref. 1), an optical receiver (figure 1 Ref. 2), a first measuring unit (figure 1 Ref. 180), a second measuring unit (figure 1 Ref. 220) , and a central processing unit (figure 1 Ref. 190).

Referring to claim 2 Ohtomo shows a multiple frequency generator that includes an oscillator (figure 1 Ref. 100), a divider (figure 1 Ref. 120), and a frequency synthesizer (figure 1 Ref. 140).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohtomo (5075878) in view of Gilmore (5955671).

Gilmore shows a signal that is generated from a received signal that is then measured (column 5 and 6). It would be obvious to modify Ohtomo to include the signal generation and measurement taught by Gilmore because this helps suppress noise in the system.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohtomo (5075878) in view of Akiyama 6255858).

Akiyama shows a measuring unit that comprises a signal corrector (column 1 and 2) and a wave width measuring unit (column 1 and 2). It would have been obvious to modify Ohtomo to include the measuring unit taught in Akiyama because this is a measuring unit that will measure phase difference in signals.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohtomo (5075878).

Ohtomo shows a signal corrector that mixes a reference signal with a received signal (figure 1), and compares the signals to obtain a phase difference.

Allowable Subject Matter

Claims 6-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
